alsa-utils

alsa-utils

- `alsa-utils` is a repository of tools to interact with ALSA devices
- https://github.com/alsa-project/alsa-utils

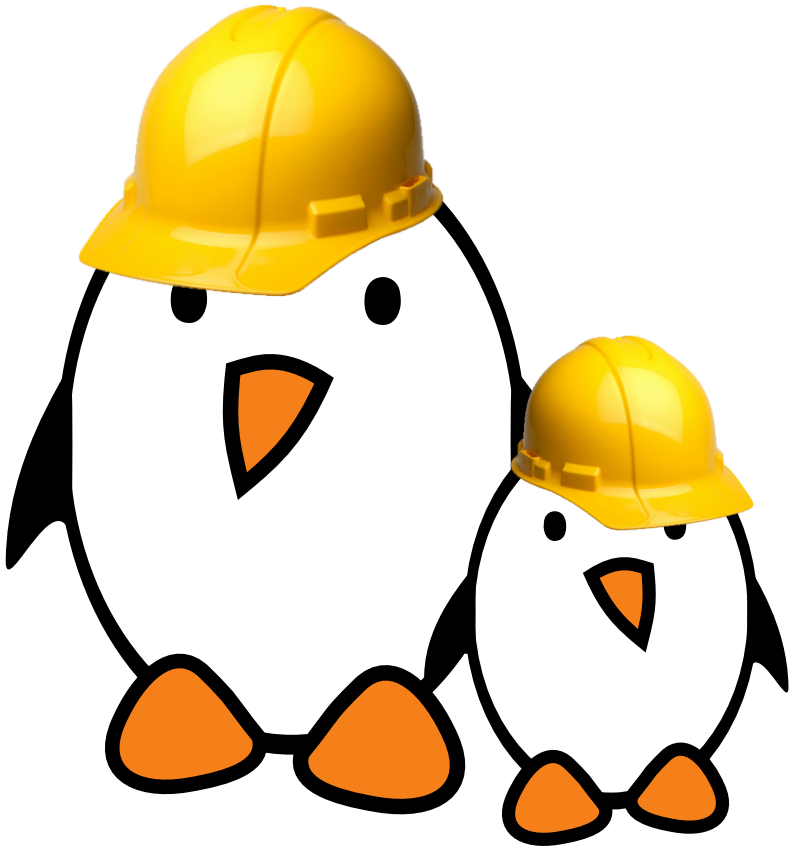
Controls

- `alsamixer` provides a `ncurse` based graphical interface to modify sound cards controls.
- `amixer` is a command line tool to set controls.
  - The `scontrols` and `controls` commands list the available controls.
  - The `contents` commands list the available controls and shows their content.
  - The `cset` and `sset` commands allows modifying the controls.
  - The `cget` and `sget` commands show the content of a specific control.
- `alsactl` is a tool that can save the control values to a file and restore them from a file.

Playback and capture

- `speaker-test` can generate tones or noises to play on specific channels with a specified rate.
- `aplay` plays an audio file. It is able to set many stream parameters.
- `arecord` can record an audio stream to a file.

Demo - Userspace tools



Using userspace tools to:

- configure sound card controls
- load and store default values for controls
- play sound
- record
