alsa-utils

alsa-utils - `alsa-utils` is a repository of tools to

interact with ALSA devices - `https://github.com/alsa-project/alsa-utils`

Controls - `alsamixer` provides a `ncurse` based

graphical interface to modify sound cards controls. - `amixer` is a command line tool to set controls. - The `scontrols` and

```
controls
```

commands list the available controls. - The `contents` commands list the available controls and shows their content. - The `cset` and `sset` commands allows modifying the controls. - The `cget` and `sget` commands show the content of a specific control. -

```
alsactl
```

is a tool that can save the control values to a file and restore them from a file.

Playback and capture - `speaker-test` can generate tones or

noises to play on specific channels with a specified rate. - `aplay` plays an audio file. It is able to set many stream parameters. -

```
arecord
```

can record an audio stream to a file.
