

Hardware initialization

Hardware initialization

The hardware needs time to initialize

- ▶ Voltage regulation, crystal stabilization
- ▶ Can be up to 200 ms
- ▶ As a software developer, you can't do anything about this part.
- ▶ All you can do is measure this time with an oscilloscope and ask the hardware board designers whether they can do anything about this. However, there are delays in the CPU which may not be possible to reduce (see the CPU datasheet).
